

*Intro to Sonic Art*

# Glove Orchestra

김태은, 서소연, 송승희, 신지선, Truong Mai Huong

Everyone can become a band performer by wearing gloves.

Various Instrument  
Sounds  
e.g. drums, cello, bass

Automatically  
Generated Melody

TouchDesigner  
– Sound Design Tool

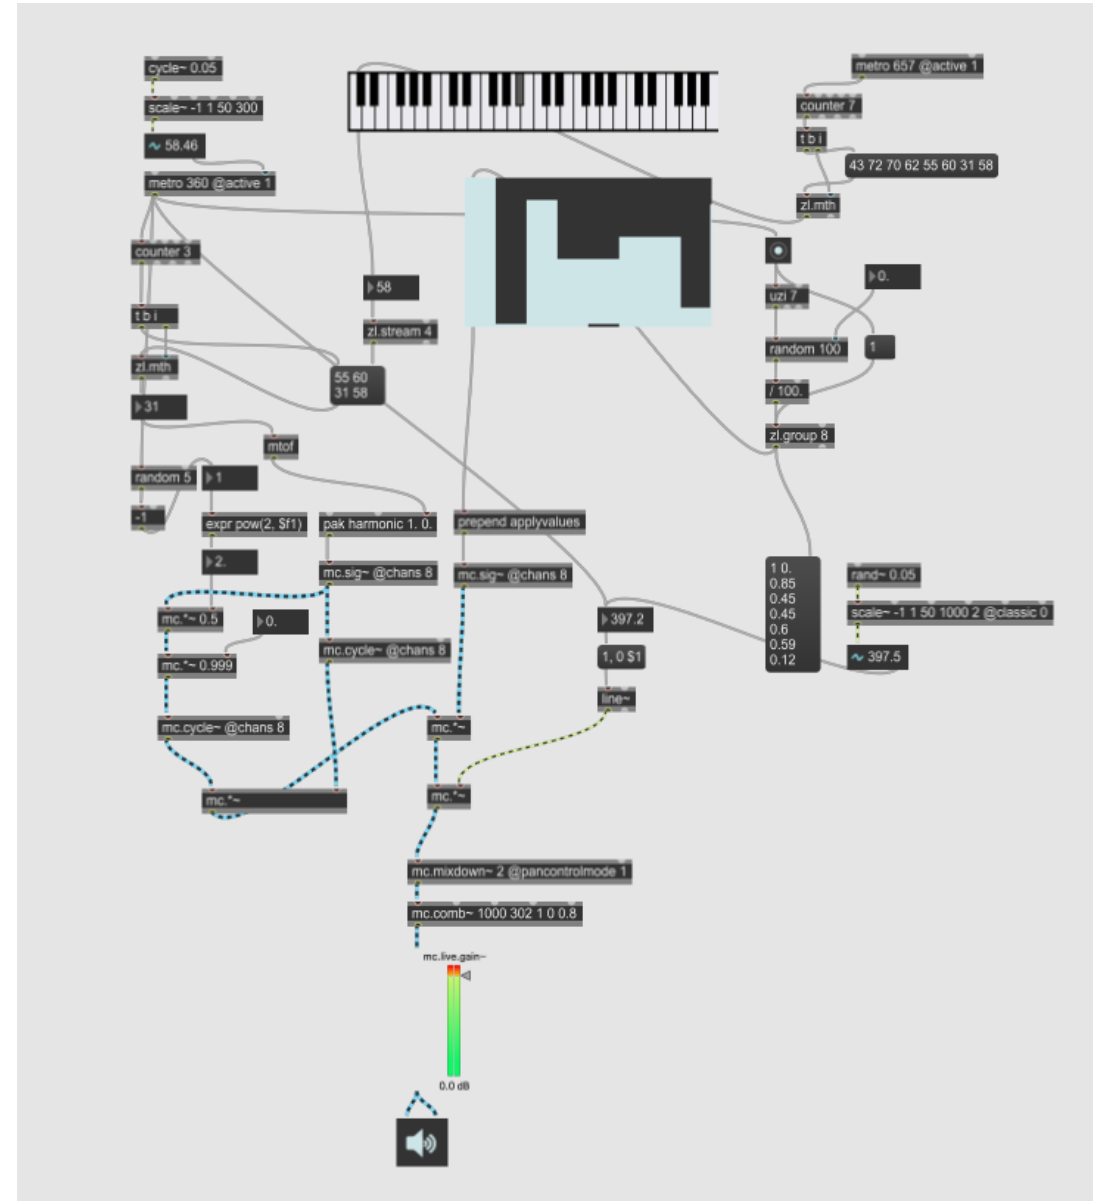

# 1. Project Description

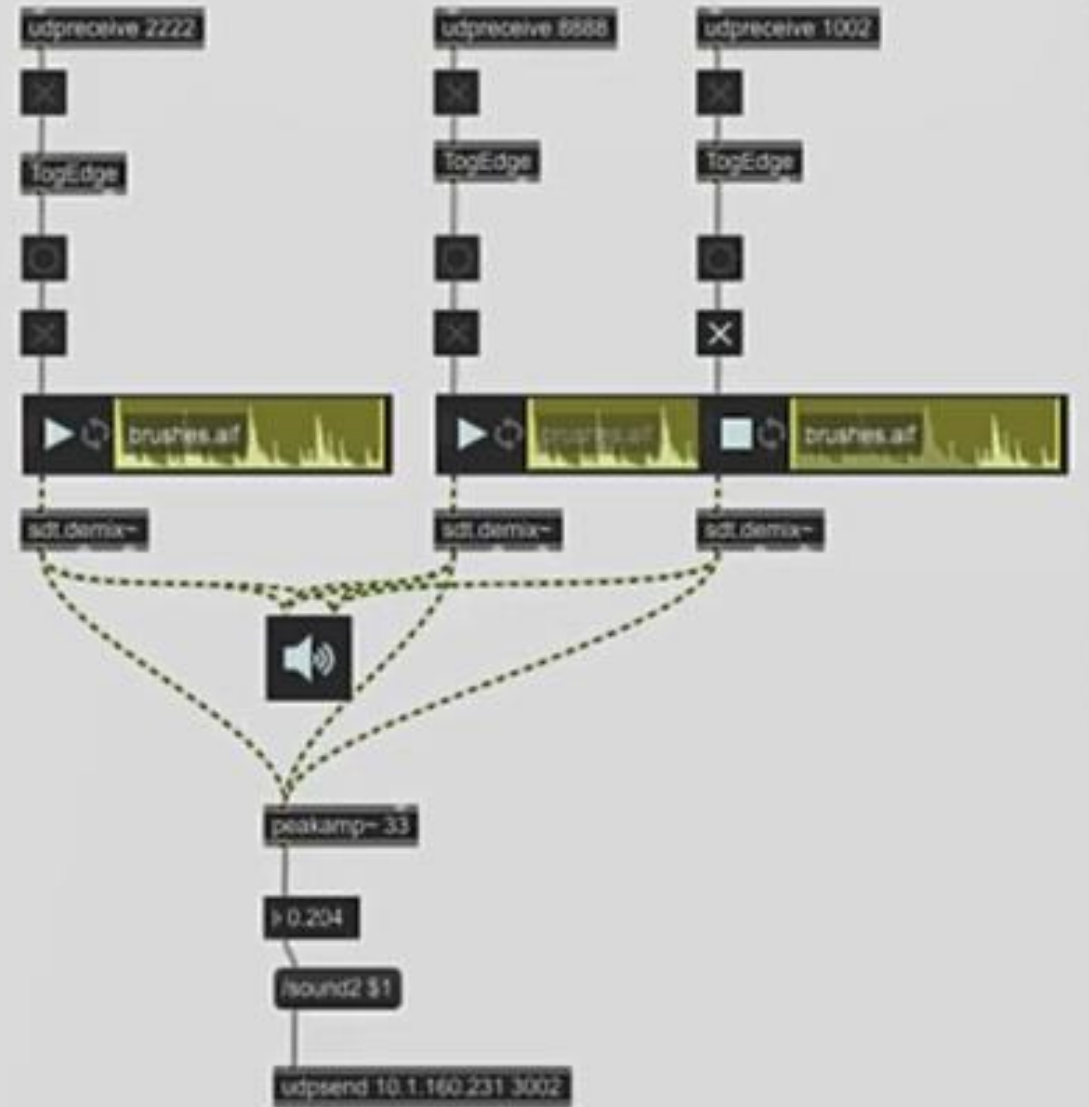

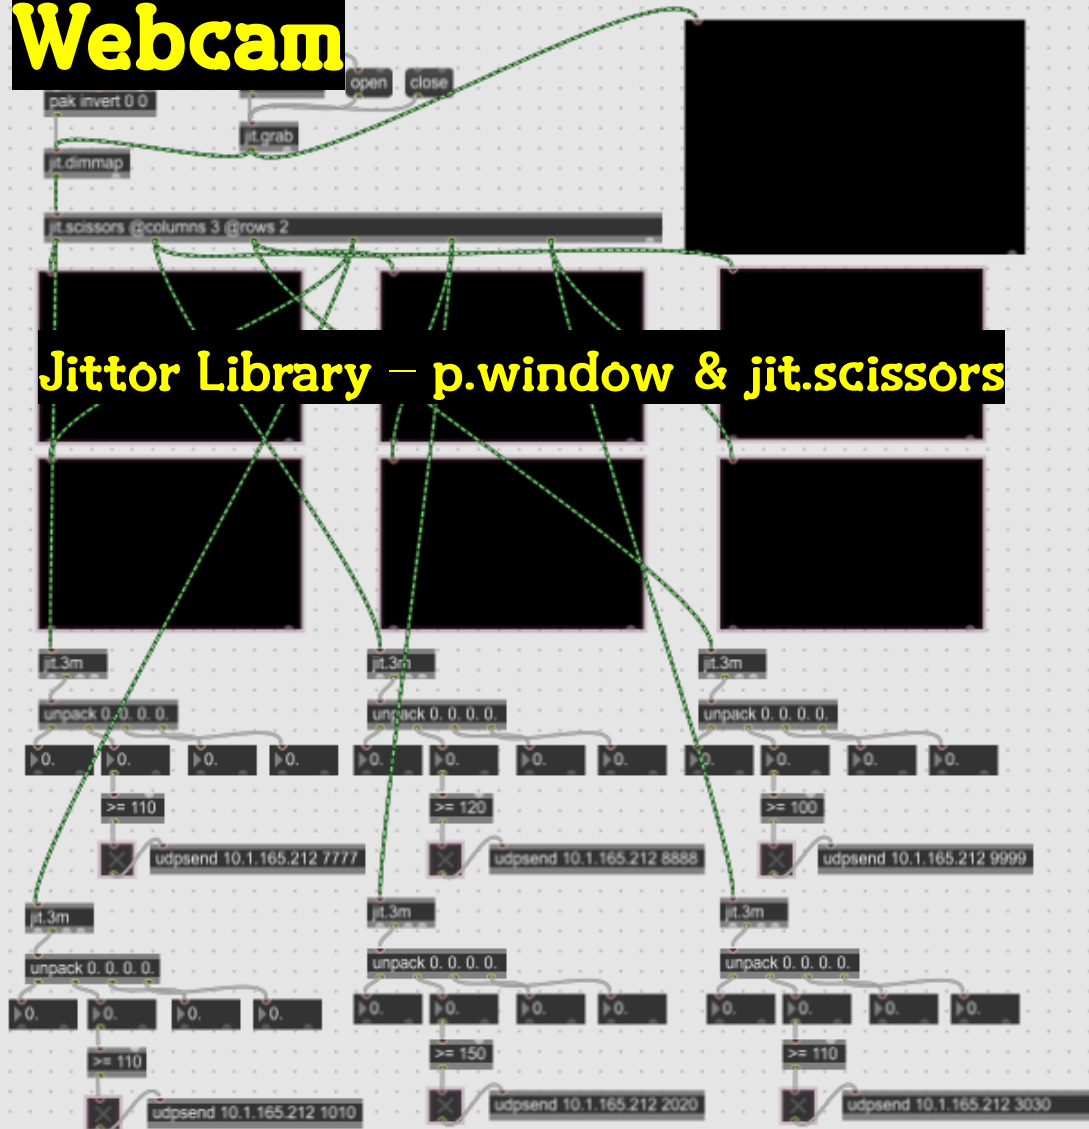

# 1. Random Melody Generator

- Ambient additive synthesis
- Speed of 360 BPM
- Basic background music in this project

# Webcam

## Jitter Library – p.window & jit.scissors

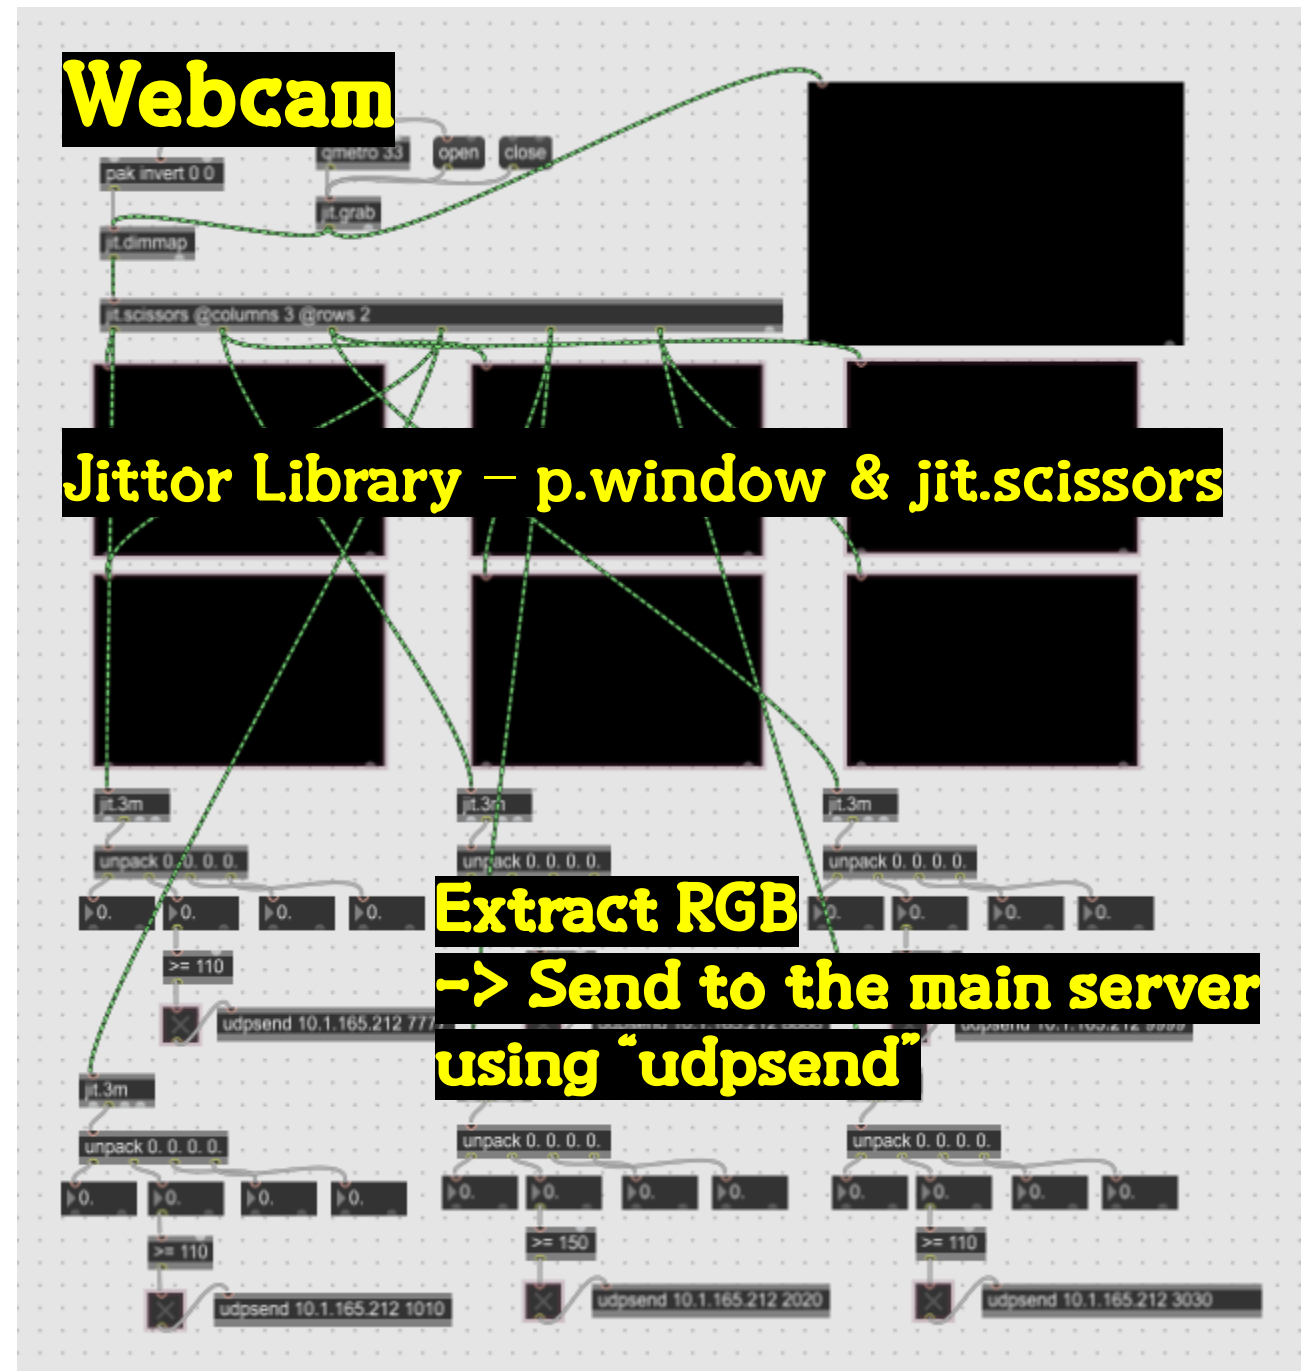

## 2. Camera Launchpad

### (1) Webcam

- Jittor Library
- Extract RGB

If the red color exceeds a certain level, the corresponding toggle is activated

- Send to the main server

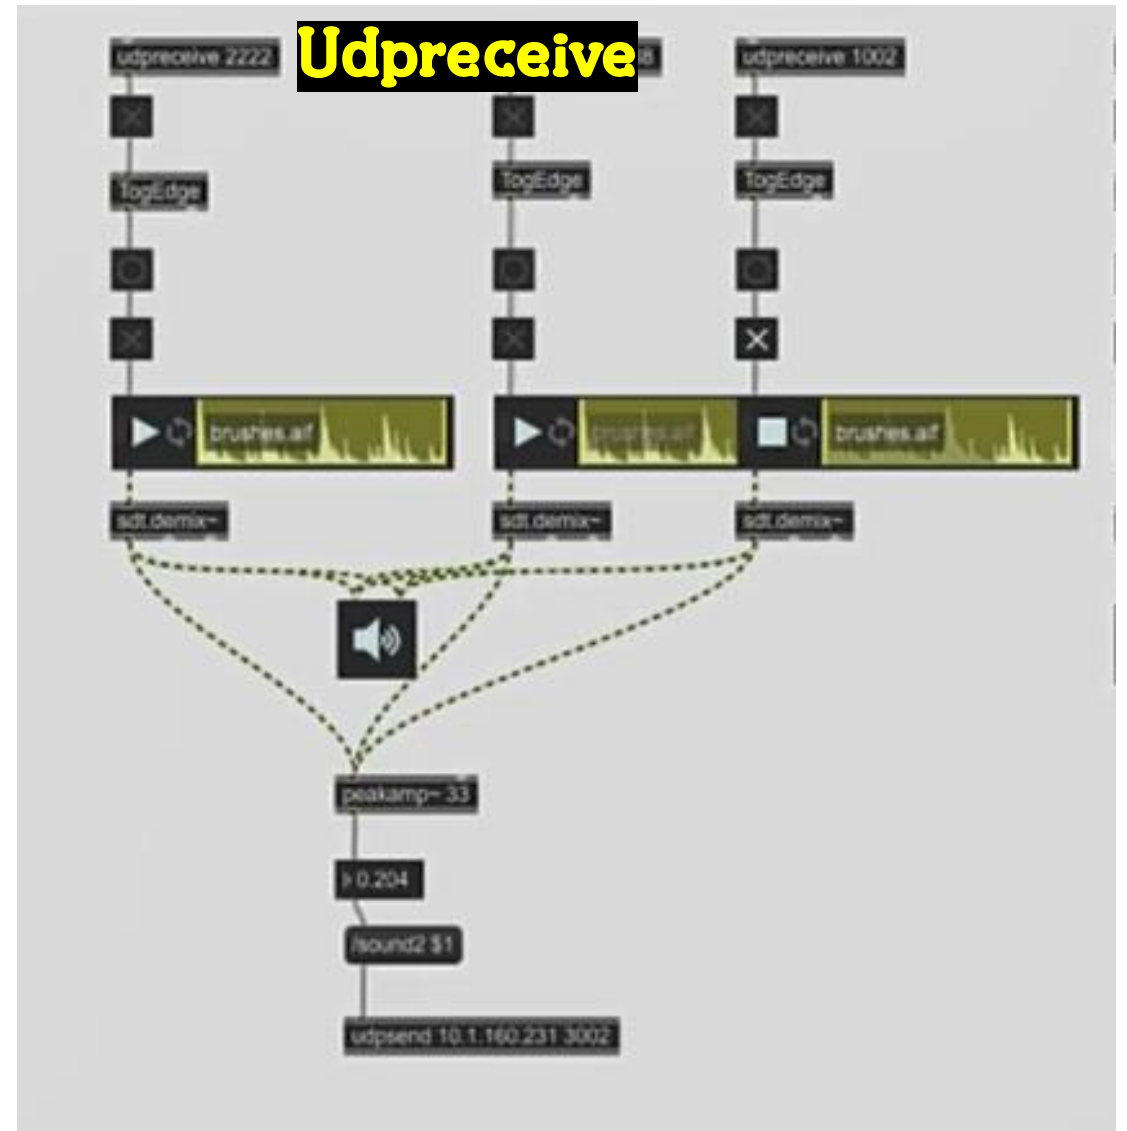

## 2. Camera Launchpad

### (2) Main Server

- Receive by "udpreceive"

=> Plays the sound connected to that specific screen

### **3. Visualization with TouchDesigner**

- To create more interactive & artistic atmosphere for the performance

⇒ Visualization of the generated sound

- CHOPS & TOPS create generative art using the amplitude and frequency from the input sound

- Idea : Connect Max MSP patcher -> audio input in TouchDesigner
- Demo Video : We used the audio device for mic

## 2. Intention of the Project

**Inspiration** : Loop-station Performances

*“We want to create something that turn simple sound  
to a full-range combination of sights and sound.”*

## **Purpose :**

**1) Explore the integration of Human movement + Sound generation + Artistic Visualization**

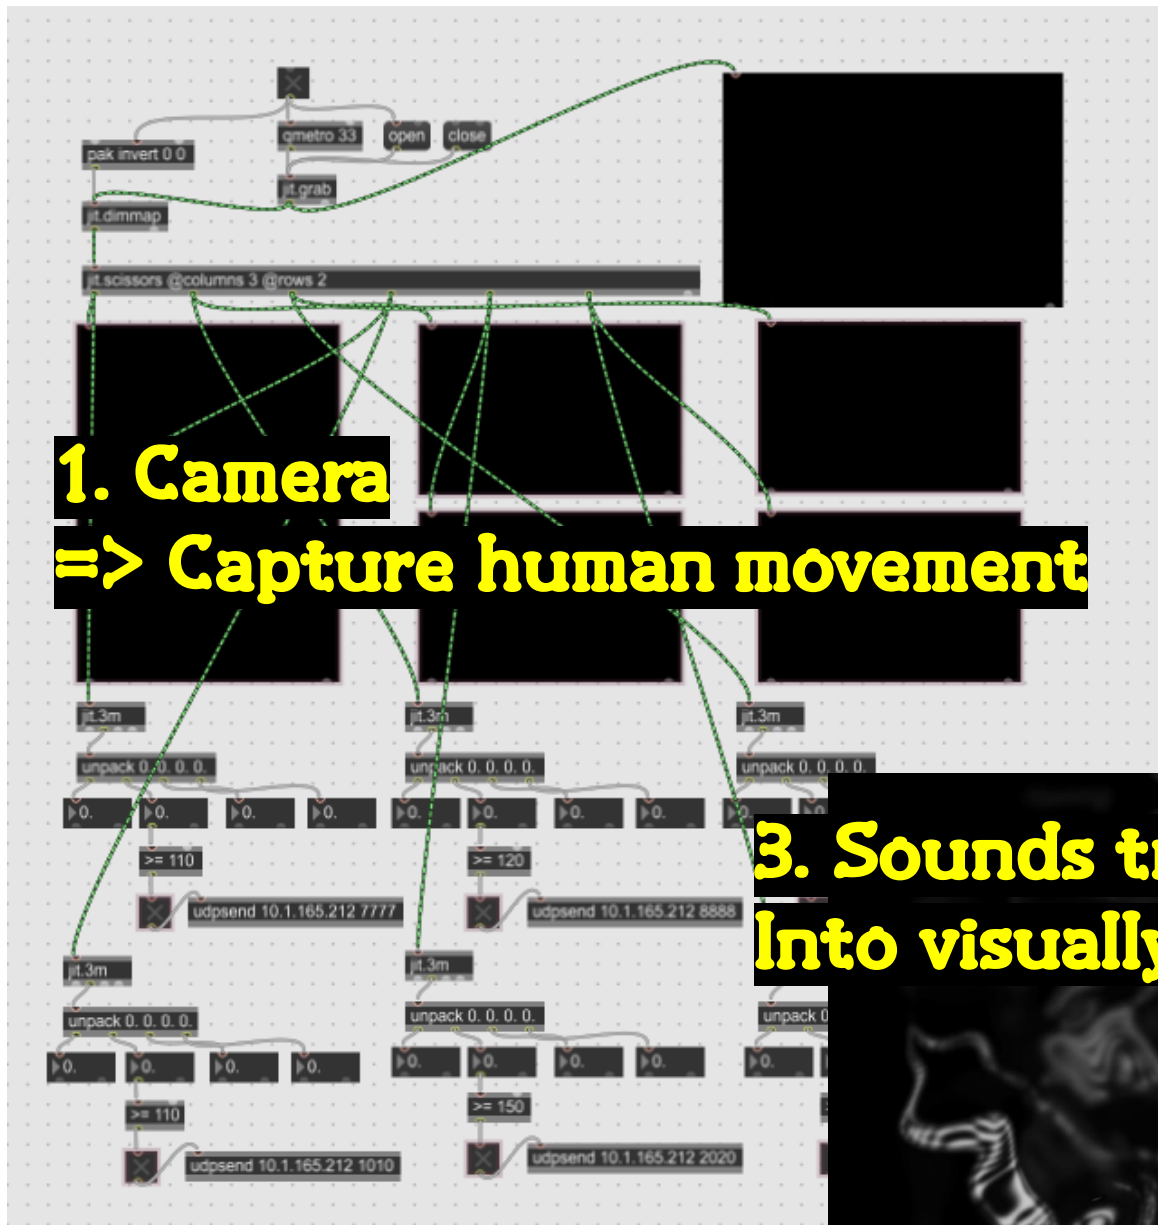

**⇒ Provide an experience of interaction & immersion (For individual)**

**2) Provide a platform to engage in arts and creativity through multi-sensory experience**

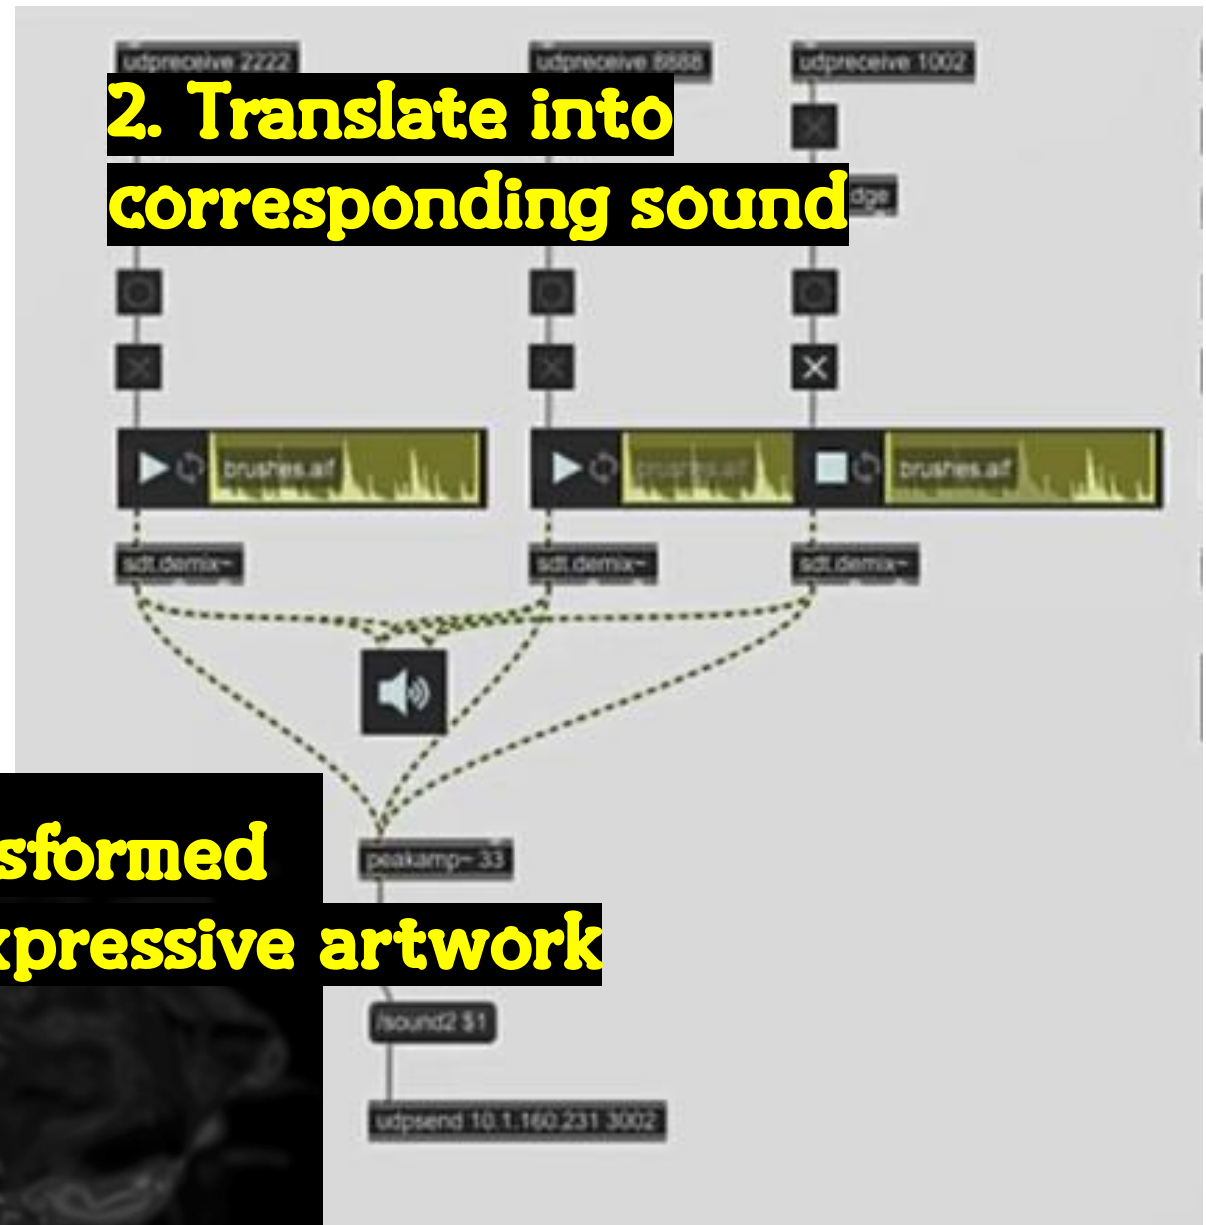

**3) Create opportunities for community by encouraging human interaction and connection (For society)**

## 1. Camera

=> Capture human movement

## 2. Translate into corresponding sound

## 3. Sounds transformed into visually expressive artwork

### 3. Demo Video

# 4. Further development

## A Media Wall of a Subway

- Camera recognizes the color of people's hands & faces
- ⇒ Produce music when people pass by
- If we install it on the electronic boards of stairs
- ⇒ Can expect people use more stairs than escalators

# Interactive Music Show

1. Increase the size of the project & operate on many computers
2. Create music in teams with multiple people on one computer  
=> audience-participating project
3. Audience can make their own sounds with the object around them => (e.g.) pet bottle, can
